Flexi-Guide FG 300

Surface Mount Channelizer Posts

“Creating Products to Save Lives”

FG 300
Model EFX

Davidson Family of Channelizer Posts Increase Visibility and Improve Safety

FG 300 Channelizer Posts Save Lives

Channelizer posts save lives by properly directing traffic and reducing the chance of accidents in many kinds of locations. Our posts are highly visible, day and night. They clearly delineate driving lanes with bright colors and reflective sheeting. To reduce the risk of fatal accidents, place FG 300 Posts at critical points along your roadways where safety hazards exist.

A Family of Posts

Davidson offers the FG 300 post in three grades: **Model PE** for general applications, **Model UR**, the industry workhorse, and **Model EFX** for your toughest installations. All three models are compatible with all six of our bases. **FG 300** posts meet or exceed state specifications for surface-mounted delineator posts, have been proven on the NTPEP Test Deck, and are compliant with NCHRP 350.

FG 300 posts available in 11 colors

FG 300 Posts are engineered to last. Flexi-Guide products are designed and built to provide high performance and durability. Use FG 300s for work zones, traffic separations, islands, parking lots and many other applications.

Clover Leaf Design for Built-in Rebound

The clover-leaf design of the **FG 300** tubular marker provides far better rebound than simple round tubes. Curving the sides of the tube changes the moment of inertia and builds up tremendous potential energy, resulting in a quick and sharp rebound when impacted.

Combine the geometry of the FG 300 with polyurethane, the toughest flexible engineering polymer, and the result is a Channelizer post that sets new standards of performance.

FG 300 Posts Have Valuable Features and Benefits:

- Superior impact resistance for lower maintenance
- Conforms to MUTCD & NCHRP 350 standards
- Replacement of damaged posts in just seconds
- Withstands extreme hot & cold temperatures
- True fluorescent colors for increased visibility
- Proven durability on the NTPEP Test Deck
- Greater reflectivity than simple round tubes
- No metal pins in bases to rust & seize
- Available in many heights & colors
- Easy installation on any roadway
- Bases can be reused
