

Black Diamond™

Pavement Sealer

GemSeal Black Diamond pavement sealer is a new, high performance alternative to asphalt emulsion (AE) sealers. With all the environmental benefits of AE sealers, Black Diamond exceeds AE performance by providing better coverage, greater durability, and superior color stability. Black Diamond also provides performance similar to refined tar sealers through ease of application and toughness against power steering marks. Finally, like all GemSeal pavement sealers, we make Black Diamond with our precision colloid mill system, giving you a product that will always be consistent to save you time on the job.

Benefits to Black Diamond Sealer:

- **Fuel Resistance** – resists gasoline and oil penetration comparable to refined tar sealers
- **Easy to apply** – applies as smoothly as refined tar sealers
- **Color stable** – eliminates bluing or graying issues common in AE sealers
- **Burn-free** – crews will love to work with it!
- **Tougher** – resists power steering marks better than AE sealers
- **Economical** – higher dilution rate than AE sealers, reduces cost per gallon
- **Temperature-friendly** – can be applied in lower temperatures than AE sealers
- **Durable** – longer lasting than AE sealers
- **Consistent** – colloid mill process takes the mystery out of mix design

Specifications:

Meets the following standards listed below:

- ASTM D 140 • ASTM D 529 • ASTM D 466 • ASTM D 2939

GemSeal Black Diamond does not contain refined coal tar but does meet the performance standards listed in:

- ASTM D 5727 • ASTM D3423 • ASTM D490 • FAA P-625; P-627; and P-630

**Alternative to AE
& Refined Coal Tar
Sealers!**
